VACCINE	DOSE	TIMING OF IMMUNIZATIONS
Hepatitis B (Hep B) <sup>1</sup>	3 doses	1st dose 2nd dose 1 month after 1st dose 3rd dose 4-6 months after 2nd dose
Measles, Mumps, Rubella (MMR) <sup>2</sup>	2 doses	1st dose 2nd dose 1 month after 1st dose
Tetanus, Diphtheria (Td) <sup>3</sup>	1 dose	Booster dose at 11-12 years of age Every 10 years thereafter
Varicella (Chickenpox) <sup>4</sup>	1 or 2 doses	1st dose 2nd dose 1 month after 1st dose for persons 13 years of age and older
Hepatitis A (Hep A) <sup>5</sup>	2 doses	1st dose 2nd dose 6-12 months after 1st dose
Influenza (Flu) <sup>6</sup>	1 dose	1 dose annually to adolescents at high risk
Pneumococcal Polysaccharide Vaccine (PPV) <sup>7</sup>	1 dose	1 dose to adolescents at high risk
Meningococcal <sup>8</sup>	1 dose	1 dose is recommended for adolescents 11-12 years of age, at high school entry (~15 yrs), and for college students living in dorms
Pertussis (Whooping cough) <sup>9</sup>	1 dose	1 dose is recommended for adolescents 11-12 years of age
Human Papillomavirus (HPV) <sup>10</sup>	3 doses	1st dose 2nd dose 2 months after the first dose 3rd dose 6 months after the first dose

(See reverse side for detailed recommendations)

- 1. Hepatitis B:** Three doses of the hepatitis B vaccine are needed for sufficient protection. A two dose hepatitis B vaccine is available for adolescents 11-15 years of age.
- 2. Measles, Mumps, Rubella (MMR):** Two doses of the MMR vaccine are recommended to provide sufficient protection. Adolescents who have not previously received the second dose of MMR vaccine should complete the schedule by age 11 or 12 years. MMR vaccine should not be given to adolescents who are known to be pregnant or who are considering becoming pregnant within one month of vaccination.
- 3. Tetanus, Diphtheria (Td):** The Td booster is recommended at 11-12 years of age and every ten years thereafter.
- 4. Varicella (Chickenpox):** The chickenpox vaccine is recommended for anyone who has not had chickenpox disease or has not had the chickenpox vaccine. Children 12 years of age and younger need one dose. Teens 13 years of age and older need two doses. A second catch-up dose of the chickenpox vaccine is recommended for adolescents who previously received one dose. The chickenpox vaccine should not be given to adolescents who are known to be pregnant or who are considering becoming pregnant within one month of vaccination.
- 5. Hepatitis A:** Do you live in a community with a lot of hepatitis A cases? Do you travel outside the United States? Do you have a clotting factor disorder or chronic hepatitis? Are you a male who has sex with other males? Do you shoot up drugs? If you answered yes to any of these, you may need to get the hepatitis A shots.
- 6. Influenza Vaccine:** A yearly flu vaccine is recommended for anyone with a serious health problem such as asthma, diabetes, or heart disease or anyone who wants to avoid getting the flu.
- 7. Pneumococcal Polysaccharide Vaccine (PPV):** The PPV vaccine is recommended for adolescents with certain serious diseases such as heart disease, sickle cell disease, lung disease, diabetes, leukemia, HIV infection or AIDS who are at greater risk for pneumococcal disease.
- 8. Meningococcal disease:** The meningococcal vaccine is recommended for adolescents 11-12 years of age, entering high school (about age 15) or going to college and planning on living in the dorms.
- 9. Pertussis (Whooping cough):** The pertussis vaccine (Tdap) is recommended at 11-12 years and may be given instead of the Td vaccine. Tdap vaccine is also recommended for adolescents 13-18 years who missed the 11-12 year Td/Tdap booster dose and previously completed the DTP/DTaP series.
- 10. Human Papillomavirus (HPV):** The HPV vaccine is the first vaccine developed to prevent cervical cancer, precancerous genital lesions, and genital warts caused by the HPV. The HPV vaccine is recommended for females 11-12 years of age. Catch-up vaccination is recommended for females 13-26 years of age who have not been vaccinated previously or who have not completed the full vaccine series.
